ABSTRACT OF THE DISCLOSURE

[0082] A system and method of determining a client ID is disclosed. First, a request is received from a user terminal. The client ID for the first user terminal is extracted from the request. A system and method of balancing a data load on a network is also disclosed. First a request is received from a client. Next, an agent is assigned to the client if the request includes a WSP connect, a WSP resume or a WTLS handshake.
